WEBINAR: AI AND THE FUTURE OF EDUCATION

This webinar will cover what AI is and isn't, equitable access and implementation, the Delaware landscape including the recently issued guidance, and policy and child development considerations for the future.

Hear from national and local experts about how AI will impact education: students, educators, families; the opportunities and risks it presents; and what to consider as it grows.

The Vision Coalition is hosting this event as part of Delaware's education plan for the next 10 years.
